[Eskag Sanjeevani](#), an integrated healthcare group, has achieved a national milestone in its mission to make medical care accessible to more people. The group has established a **Pan-India network of more than 170 Dialysis Centers and 25 advanced Diagnostic Centres**, operating primarily under the **Public-Private Partnership (PPP)** model – an initiative aimed at bridging government healthcare reach with private-sector efficiency.

This expansion reinforces Eskag Sanjeevani’s position as a notable PPP healthcare operator, delivering healthcare services to a large number of citizens each year. By partnering with state governments and leveraging structured delivery models, the group continues to make healthcare accessible to communities that have long remained underserved.

## Dialysis and Diagnostics: Expanding Access, Empowering Lives

At the core of Eskag Sanjeevani’s national footprint lies its deep commitment to renal care and diagnostics. Through its **170+ operational Dialysis Centres**, the organisation plays an important role in India’s ongoing efforts to address Chronic Kidney Disease (CKD). These centres ensure that hemodialysis and related treatments are available closer to patients’ homes, reducing travel burdens and easing pressure on public hospitals.

The establishment of **25 diagnostic centres** under the PPP model has further strengthened India’s healthcare screening and early detection infrastructure. Equipped with pathology and imaging technologies, these centres provide diagnostic services for a wide range of medical conditions. Collectively, Eskag Sanjeevani’s dialysis and diagnostic facilities have delivered **several treatment and testing sessions**, representing one of the larger PPP healthcare networks in the country.

## Multi-Specialty Hospitals: The Core of Comprehensive Care

Complementing its PPP operations, Eskag Sanjeevani operates **NABH-accredited Multi-Specialty Hospitals** located in **Bagbazar, Baranagar, and Khardaha**. They also have another branch located at Dainhat. All hospitals serve as tertiary care hubs, offering a spectrum of super-specialities, including cardiology, orthopaedics, nephrology, critical care, gastroenterology, general surgery and more.

Each hospital is designed as a **centre of clinical practice**, staffed with qualified medical professionals and equipped with appropriate infrastructure to handle complex medical and surgical interventions. Patients from outreach PPP centres are referred to these hospitals for advanced treatment, creating a **hub-and-spoke model** that connects primary access points with tertiary care facilities.

This integrated network ensures **continuity of care**, enabling Eskag Sanjeevani to offer an end-to-end healthcare ecosystem – from early diagnosis to advanced treatment and recovery – within a single unified system. It reflects the group's approach to combining technology, patient care, and ethical practice in care delivery.

### Medical Care under One Roof

[Eskag Sanjeevani Hospitals](#) offer a range of healthcare services in many specialities. This ensures patients get complete and professional treatment.

- **Cardiology and Cardiothoracic Surgery:** Skilled cardiologists lead the advanced cardiology department, which uses tools such as 128-slice cardiac CT scans to diagnose and treat patients.
- **Neurosciences:** The Neurology and Neurosurgery teams focus on identifying and treating problems like strokes, brain cancer, and severe spinal cord disorders. Their work has contributed to established clinical outcomes.
- **Orthopaedics and Joint Replacement:** The orthopaedic unit addresses injuries from accidents to issues related to ageing. They achieve reliable outcomes in modern hip and knee replacement surgeries.
- **Gynaecology (Obstetrics and Gynaecology):** This department provides services including pregnancy care, infertility treatment, and complex surgeries. It has gained recognition as Bengal's first "**Mullerian Anomaly Centre**" and provides expertise in reproductive health alongside care for challenging congenital gynaecological disorders.
- **Gastroenterology and General Surgery:** This team uses tools like Endoscopy and ERCP to diagnose and treat digestive problems. They also focus on performing general and laparoscopic surgeries with small cuts aimed at supporting recovery.
- **Other Major Departments:** The hospital group provides services in **Nephrology (Kidney), Urology, Oncology (Cancer), Paediatrics (Child), Dermatology (Skin), and Critical Care.**

### Driving the Future of Healthcare through Partnership

"Our growth is guided by a simple belief – quality healthcare should never be a privilege," said **Sunil Agarwal, Honourable Managing Director, Eskag Group of Companies**. "With over 170 dialysis and 25 diagnostic centres under the PPP model, and four advanced multi-speciality hospitals forming the backbone of our network, we are redefining healthcare access by blending compassion, technology, and partnership."

The group's alignment with the Government's healthcare vision continues to strengthen its leadership position in PPP-based healthcare. By expanding collaborations with central and state health departments, Eskag Sanjeevani plans to increase its footprint across dialysis, diagnostics, and hospital care in the coming years.

### Our New Launch: Advanced Silent MRI at Eskag Sanjeevani Bagbazar

In a significant technological upgrade for 2025, **Eskag Sanjeevani Hospital Bagbazar has launched a 1.5 MRI machine**. Designed with patient comfort as a priority, this machine is **soundless and non-claustrophobic**, improving the patient experience during scans. True to the group's mission, this diagnostic service is being made available at an **affordable** cost, ensuring diagnostic imaging is accessible to all.

### Combining Modern Technology with Compassionate Care

Eskag Sanjeevani Hospitals use medical technology to provide patient care. It has modular OTs with controlled environments and labs that support testing and surgeries. Patients in critical condition receive care in specialised units such as the ICCU and HDU.

The Bagbazar branch is soon opening a **Cath Lab** to expand its heart treatment services. Additionally, in the Neurosurgery department, the **Neuro Microscope** supports precision and safety by magnifying brain and spinal structures during surgeries.

The strength of the organisation lies in its team. The Bagbazar main branch has a team of over **150 expert doctors**, as well as more than **400 trained nurses and support staff**. Their combined knowledge, experience, and compassion supports the care delivery associated with Eskag Sanjeevani.

### **Building a Healthier Tomorrow**

With investments in medical technology, capacity building, and patient-centric operations, Eskag Sanjeevani remains steadfast in its vision to become a trusted provider of inclusive, ethical, and technologically advanced healthcare.

Every new centre and hospital represents another step toward the goal of **making healthcare accessible and affordable across India**.

### **About Eskag Sanjeevani Hospitals**

Established in **2004**, Eskag Sanjeevani has emerged as a notable healthcare provider in Kolkata. Dedicated to delivering medical care, the organisation serves the community through its facilities in **Bagbazar, Khardah, Baranagar, and Dainhat**.
